PECANS AND FRUITS ARE PROFITABLE

EASTERN VARIETIES

These Varieties Thrive Best in Lower Altitudes With Fair to Heavy Moisture

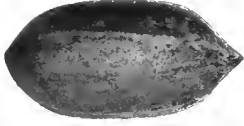

STUART

The Stuart comes nearer being suited to all sections of the country and all soils than any other variety. A large nut, fills well, medium to heavy bearer. A fairly fast growing tree. One of the earliest ripening of all large standard pecans. 48 per cent meat.

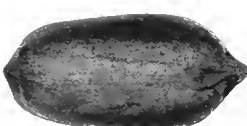

SUCCESS

A large and sturdy first class pecan. Strong growing tree, early bearer, thin shell, cracks well and the meat can be taken out in halves. Ripens almost ten days later than Stuart, and is fast gaining in prominence. 52 per cent meat.

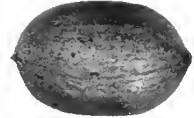

DELMAS

A very vigorous growing tree and heavy bearer, with splendid foliage, large nuts. Forty to fifty will make a pound. One of the best for shade purposes. 48 per cent meat.

SCHLEY

This is an ideal pecan. Large size, very thin shell, fills and cracks out well, fine flavor. Rapid growing tree. Beautiful foliage, and the nuts sell for 5 cents to 10 cents more per pound than other varieties. 60 per cent meat.

MONEY MAKER

Originated in Madison Parish, Louisiana, widely distributed. Seed medium, kernel fairly plump, quality, fair. Especially suited to planting in the northern range of the area adapted to southern varieties. 46 per cent meat.

MOORE

A very fast growing tree. Medium size nuts, thin shell, good flavor, very productive, and one of the earliest to mature. About 46 per cent meat.

Price List of Our Better-Rooted Pecan Trees

EASTERN VARIETIES		WESTERN VARIETIES	
Stuart, Success, Schley, Money Maker and Moore		Burkett, Texas Prolific, Oklahoma, Western Schley and Halbert	
Size	Each, in lots of 10 to 100	Size	Each, in lots of 10 to 100
2 to 3 feet	\$0.70	2 to 3 feet	\$0.50
3 to 4 feet	.85	3 to 4 feet	.60
4 to 5 feet	1.00	4 to 5 feet	.70
5 to 6 feet	1.25	5 to 6 feet	.80
6 to 7 feet	1.40	6 to 7 feet	.90

9 to 10 feet	2.50	9 to 10 feet	1.35
10 to 12 feet	3.00	10 to 12 feet	1.55

You may order two or more varieties and take advantage of the price applying to the total number of trees ordered. Do not count nut trees and fruit trees together. \$1.00. All Prices are F. O. B. Tyler, Texas. No extra charge for packing and burshipping trees to points in the U. S. A. Extra packing charges on all foreign shipments. No orders accepted for less than \$1.00.

ENGLISH WALNUTS

WILSON'S WONDER. Produces enormous size nuts; hardy; rough shell. Bears very young and heavily. Nuts bring fancy prices.

FRANQUETTE. Large, long, pointed nuts; kernel sweet, rich and full. Regular bearer, as it finds late in the season.

BLACK WALNUTS

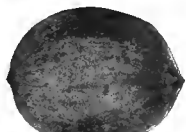

THOMAS. Early and prolific bearing, large, thin shell nuts, with kernels in halves. Adapted to nearly all types of soil—will grow in practically all parts of United States. Trees very hardy.

PRICES ON ENGLISH AND IMPROVED BLACK WALNUT TREES

WESTERN VARIETIES

These Varieties Live and Produce in the Higher Altitudes and Drier Climates

BURKETT

Originated at Clyde, Texas, one of the best of the West ever bred. It is also doing well in high ground in East Texas. Medium to large size, fills well, good flavor, and prolific. 55 per cent meat.

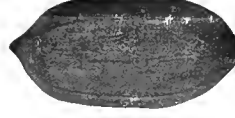

WESTERN SCHLEY

Very similar to Eastern Schley, except that it thrives better in the drier climate and higher altitudes of the West. A very fine nut for the West. 60 per cent meat.

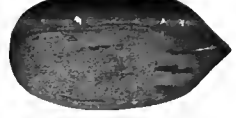

HALBERT

Young trees inclined to be crowded, but get straighter as the trees grow older. Very early and prolific bearer. Medium size nuts, very thin shell, excellent flavor. A good tree for shade. Should NOT be set in Mississippi, Louisiana, East Texas or Eastern Oklahoma. 61 per cent meat.

OKLAHOMA

Medium tree, Arkansas, Oklahoma. Large nut with sharp much like the Delmas. Thin shell. About forty to the pound. A heavy producer. The tree is rugged, with drooping or weeping branches. Matures rather late. We believe this will prove to be a good variety for Texas. 46 per cent meat.

TEXAS PROLIFIC

This variety is a large nut. Shell is much thicker than the other varieties. It is a heavy producer, and so bears should be planted extensively in West Texas. It is showing up well on a small scale in East Texas and Oklahoma. Texas Prolific will not disappoint you. 55 per cent meat.

FRUITS OFFER Rapid FINANCIAL RETURNS

Twenty-Two Standard Varieties of Peaches

PEARS

KIEFFER. Best variety for the Southwest, large, yellow, rusty check; fine for cooking and market. Ripens in October.

GARBER. Oriental strain, like the Smith's Fruit; resembles Kieffer in size, shape and color. Ripens three weeks before Kieffer.

CHINESE SAND. Called the "Pineapple Pear." Valuable for the South for canning. Flesh coarse, about the quality of Kieffer. Tree good grower, not subject to blight, good bearer. Ripens August. Best suited to that section within 100 to 150 miles of the Gulf Coast.

BARTLETT. Everyone is acquainted with this large yellow pear. Fruit very rich and highly aromatic. That's why this pear can always be sold when others are refused. Tree grows dense and of even, conical shape. Ripens in August.

LECONTE. Large, pyriform; smooth; pale yellow. Quality good when properly ripened. Ripens July 20th to end of August. Tree begins to bear when five years old.

Size	Each	Each, in lots of 10 to 100
3 to 4 foot size	\$0.35	\$0.30
4 to 5 foot size	.45	.40
5 to 6 foot size	.60	.50
6 to 7 foot size	1.00	.80

PLUM-CHERRIES

(Sometimes called Dwarf Cherry)

COMPASS. Cross between plum and cherry. Vigorous grower, prolific; hardy; bears early. Fruit dark red, rather small. Ripens in June. Should not be picked until ripe.

OPATA. Fruit medium size; purplish-red, flesh greenish color, with meat clinging to seed. Ripens last of June and first part of July. Tree is hardy and bears young.

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.30	\$0.20
3 to 4 foot size	.35	.25
4 to 5 foot size	.50	.40

JAPAN PERSIMMONS

Japan Persimmons are adapted to the South. They thrive in land suited to cotton. Trees subject to very few diseases. Thrifty and very prolific.

TANE NASHI. Fruit large to very large; roundish conical, seedless, color, light orange-red, with brown yellow flesh. An excellent shipper. Flesh asstringent until soft. Ripens in October.

HIYAKUME. Medium to large fruit; light orange color, turning to brown when soft; roundish oblate with ends flattened. Sweet, meaty. Makes good growth; a free bearer. Ripens in October.

EUREKA. Medium-sized oblate, tomato-shaped fruit. Originated in Texas; withstands rather severe drought conditions and low temperatures in winter. Ripens in November.

YEMON. Large; rather flat; yellow, with orange flesh; seedless; good bearer. The best market variety. Ripens late.

2 to 3 foot size, each	.65c
3 to 4 foot size, each	.75c
4 to 5 foot size, each	.85c

FIGS

BROWN TURKEY. Large, brownish-purple; fruit very sweet, harder than Magnolia; begins to ripen last of June.

MAGNOLIA. Fruit very large, sweet and rich; ripens in June until frost. Should bear first year.

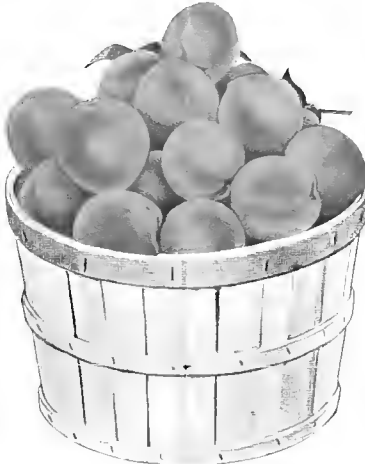

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.25	\$0.20
3 to 4 foot size	.40	.30
4 to 5 foot size	.50	.45

APRICOTS

MOORPARK. Deep yellow fruit, red bluish on sunny side; flesh, bright orange; freestone. Best variety for commercial purposes; fine for canning and drying. Tree vigorous; very prolific. Fruit ripens in June. Adapted to all sections of the Southwest.

EARLY GOLDEN. Medium in size; yellow, rich, juicy, and of a delightful flavor; freestone. Ripens in June.

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.30	\$0.20
3 to 4 foot size	.35	.25
4 to 5 foot size	.50	.40

Famous STUBENRAUCH Peaches

TENA. Large, ripens August 1st to 10th; freestone, yellow and red meat, showing traces of Indian blood, extra good for canning.

FRANK. Clingstone, good flavor, extra good for pickles, ripens August 10th to 15th, very heavy bearer. Mr. Stubenrauch says the Frank has not missed a crop in more than thirty years, and that he believes it is his best all-round peach—the most remarkable of all peaches—beyond a doubt.

BARBARA. A freestone, ripens August 15th to 30th, a Bell October and Elberta cross; round, large, excellent quality; extra fine for canning.

PRICES OF THESE TWENTY-TWO STANDARD VARIETIES OF PEACHES

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.25	\$0.20
3 to 4 foot size	.30	.25
4 to 5 foot size	.40	.35
5 to 6 foot size	.50	.45

We Now Offer Two of Our Own Peach Creations

FAIR'S BEAUTY (Copyright No. 274380). This is a very delicious variety, splendid for eating direct from the tree—none better for canning. Semi-cling; yellow freestone; large to extra large. Ripens 15th to July 4th. This is the first time we have offered this peach to the general public; eighty-three carloads were shipped from one of our orchards last season.

GOLDEN BEAUTY (Copyright No. 274830). This is a large, yellow freestone, with beautiful red cheek. It ripens from July 20th to 25th, three weeks earlier than Elbertas. We have tested this peach for fifteen years, and are thoroughly convinced that it is one of the very best early ripening yellow freestone peaches.

PRICES OF FAIR'S BEAUTY AND GOLDEN BEAUTY PEACHES

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.40	\$0.35
3 to 4 foot size	.50	.45
4 to 5 foot size	.75	.60
5 to 6 foot size	1.00	.75

OUR CUSTOMERS ARE OUR BEST BOOSTERS

I bought three pecan trees and six peaches last winter, and I am delighted with every one of them. One of my pecan trees, planted in early February, 1935, has nine full-sized pecans (Western Schley). It is a wonder to the neighbors.

—Mrs. E. Schulz, Austin, Texas.

I received the twelve Schley pecan trees and the one Wilson Wonder walnut tree promptly, and in excellent condition. My neighbors agree with me that it was the finest bunch of trees we have ever seen.

Thanks for prompt shipment.

—T. H. Jordan, Texarkana, Texas.

My pecan trees, planted five years ago, are worth \$10.00 a tree.

—J. M. Womack, Graford, Texas.

Up to date I have purchased three hundred trees from you, shipped to Gonzales, Texas. I wish to advise that I have only lost one tree out of three hundred. The orchard is the finest bunch of trees that I have seen in many years.

—A. H. Ehrig, Brenham, Texas.

About the first of March, 1935, we bought some trees from your nursery. Among the trees was one four-to-five-foot Burkett pecan; and I thought you might be interested in the record of this tree. The tree doubled its height in eight months, and bore one large, fully developed pecan. This pecan was taken from the tree the latter part of October, just eight months after the tree was set out. We considered this so unusual that we made several pictures of the tree.

We were very much pleased with this tree, and hope to set out a large number of the Burkett trees next year.

—W. B. Shelton, Arlington, Texas.

We Furnish Instructions With Every Shipment

With every shipment of trees... either pecan trees or fruit trees... you purchase from us, we send you a sheet of instructions, giving clear, concise, detailed information relative to handling, setting, and caring for the trees. These instructions will assist you in securing the most satisfactory results from your trees.

APPLES

DELICIOUS. Beautiful, red-striped winter apple. Good quality, fine flavor. One of the best known and best liked apples. Every home should have a few. Ripens in November.

EARLY HARVEST. Medium, bright straw color; tender; sub-acid, fine dessert and cooking apple. Must be handled carefully for market. Ripens in June.

RED JUNE. One of the best early apples for table and market. Medium size, deep red in color. The flesh is white; crisp; excellent in flavor. Ripens in June.

YELLOW TRANSPARENT. Widely known; well liked, large size, transparent yellow, quality good, crisp; sub-acid, very fragrant. Excellent cooker. Fruit tender, ripens carefully handling. Tree bears young, rather dwarfish growth. This is an extremely hardy variety. Ripens in June.

WINESAP. One of the oldest American apples, still increasing in favor. Its size, color, and, particularly, its quality, have given it the well-deserved popularity it enjoys. Medium size, vivid red, highly satisfying flavor. One of the best keepers of all apples. All-purpose apple, and a good one. Ripens in September.

GRIMES GOLDEN. Good, golden yellow apple, an old favorite over the United States on account of beauty and size. Tree very productive, long-lived, splendid for commercial planting and home orchards. Ripens in early fall.

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.30	\$0.20
3 to 4 foot size	.40	.25
4 to 5 foot size	.50	.35

PLUMS

AMERICA. Successful plum anywhere. Bears very young, and enormous crops. This wonderful plum should be in every orchard. Where there is no orchard, there should be a few trees. It is as beautiful as a plum can possibly be—golden yellow with red cheek. Ripens about June 15th.

BURBANK. Extremely popular in all sections. Richly colored, red mottled, dotted with yellow. Heavy bearer. Ripens in July.

SIX WEEKS. Earliest of all plums. Large; oblong; bright red, flesh, pink, seed, small, upright, vigorous; prolific. Ripens May 20th to June 1st.

GOLD. Nearly transparent, golden yellow, wide range, sure bearer. Ripens last of June.

METHLEY. Handsome tree; fruit, large; golden red. Quality fine. Good bearer. Ripens May 25th.

BRUCE. Large, red. Very productive; well suited for North Texas, the Panhandle and Oklahoma. Ripens June 1st.

RED JUNE. Skin, purplish-red; flesh, yellow; solid, somewhat coarse-grained; juicy, sub-acid, good quality; clingstone. Ripens about June 5th to 15th, and is the earliest large-fruited market variety.

BOTAN. Pinkish-red; Japanese strain; medium size; yellow flesh; quality, good; heavy and regular bearer. Ripens about July 1st.

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.30	\$0.20
3 to 4 foot size	.35	.25
4 to 5 foot size	.50	.40

GRAPES

MOORE'S EARLY. Very large; early; black; fine quality; good market grape; very healthy; prolific. Ripens last of May or early June.

CONCORD. Best known of all grapes; large; black; suited for table or market. Ripens in July.

NIAGARA. Large; greenish-white; semi-transparent; quality, good; a seedling of Concord, successfull over a wide range of territory. Mid-season.

CARMAN. One of the most prolific and popular varieties; splendid for table or for wine, grape juice, preserves, and jelly. Cluster very large, sometimes weighing two pounds; shouldered; very compact. Berries medium size; black with thin bloom. Skin, tough, thin, never cracks; pulp, meaty; firm, but tender when fully ripe; splendid quality. Ripens in July.

Size	Each	Each, in lots of 10 to 100
2 to 3 foot size	\$0.30	\$0.20
3 to 4 foot size	.35	.25
4 to 5 foot size	.50	.40

TEXAS PECAN NURSERY, INC., TYLER, TEXAS

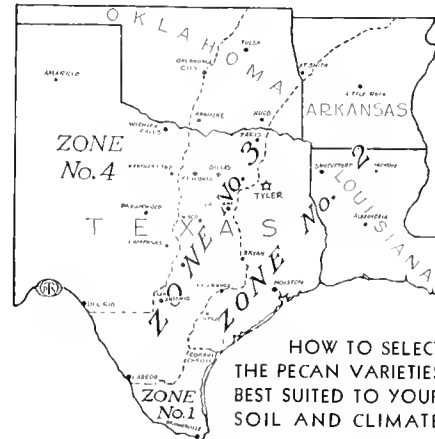

LARGE PROFITS POSSIBLE FROM A SMALL INVESTMENT

Trees for a Ten-Acre Pecan Orchard for Less Than \$100

Many people fail to realize that it requires only a small investment to buy sufficient good, well-rooted pecan trees to plant a dandy ten-acre orchard. From 12 to 17 trees to the acre are sufficient, and we can supply you with first-class trees, *bearing our famous lateral root system*, for as little as fifty cents each, and up, depending upon the size and the quantity purchased. (Price list of our pecan trees is shown elsewhere herein.) A few dollars invested in good, well-rooted pecan trees, and just a reasonable amount of care given them after they have been planted, will prove to be mighty good old-age insurance.

Our Lateral Root System Assures Success for You

From twenty-eight years of continuous pecan tree culture we have learned certain things that enable us to produce better pecan trees. Our famous lateral root system has been developed as a result of a constant series of experiments conducted by us for over a quarter of a century. We found that a good lateral root system is the life and making of a pecan tree; that the more lateral roots a tree has, the more feed roots it will have. A tree cannot have too many feed roots, as they gather the plant food and moisture so vital to early, and rapid, growth. These feed roots are finally responsible for the all-important job of producing pecans. We honestly believe we can supply you with pecan trees that will *live better*, that will *grow better*, and that will *produce better*, than trees you purchase elsewhere.

HOW TO SELECT THE PECAN VARIETIES BEST SUITED TO YOUR SOIL AND CLIMATE

ZONE No. 1—Not recommended for commercial planting. We recommend for home planting in EAST PART: Stuart, Success, Moore, Money Maker, in WEST PART: Burkett, Success, Schley.

ZONE No. 2—Only the Eastern Varieties recommended: Success, Moore, Schley, Delmas, Money Maker, Stuart. We would add Burkett for a full land in the West Central part. Success, Moore, Money Maker, Schley, and Stuart should be used for bottom lands. Plant Delmas on upland. Stuart seems to be especially adapted to extreme East part of this section and bottom lands in the Western part. These are known as tested Eastern Varieties.

ZONE No. 3—Both Eastern and Western Varieties recommended. Western Varieties for West part and uplands; Eastern Varieties in East part and on low lands. Burkett, Western Schley, Texas-Pringle, and Halbert are tested Western Varieties.

ZONE No. 4—Plant Western Varieties only.

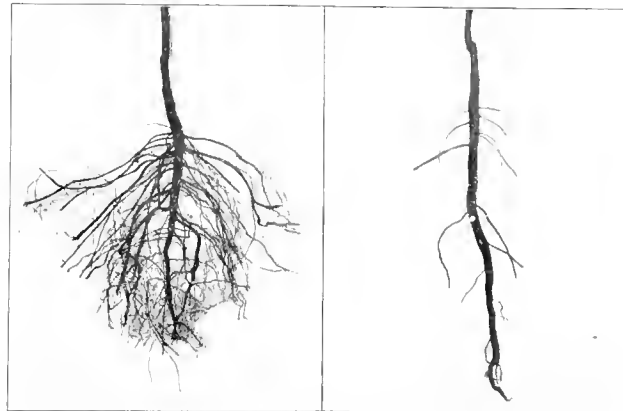

OTHER STATES—Continue zone lines North east about 100 to 125 miles, planting Eastern Varieties in the lower altitudes and river bottoms of Zone 3, and the Western Varieties on the upland and to the higher altitudes of Zone 3. Plant Western Varieties on all lands west of dividing line between Zones 3 and 4.

Fruit Orchard Requires Only a Small Investment

Because there are so many combinations of fruits that will make a nice orchard, it is impractical to set any fixed amount as being necessary. Write us the kinds and varieties of fruits you would like to have in your orchard, and tell us the size of the orchard you wish to plant. We will be glad to advise you how much investment will be required, and will also be glad to suggest various combinations which, from our experience of many years, we have learned may be expected to give the best results from the standpoint of your location, seasons, and pollination. There is, of course, no obligation on your part.

Our Low Prices Will Help You Get a Start

The prices we offer are very reasonable. Most of our business is done by mail, which means that our selling expense is low. We pass this saving on to you. When you buy from a large nursery like ours, you are sure of getting good, fresh, well-rooted trees, instead of stock that may have been heeled-in on some yard for many days and which may be badly deteriorated when you receive it. We fully guarantee every tree we sell. (Read our guarantee on the preceding spread.) Our firm is well established, having been in business for over a quarter of a century. We suggest you make inquiry as to our responsibility by writing to the Texas Agricultural & Mechanical College, College Station, Texas, or to any bank or business man in our home city of Tyler, Texas. We are rated in Dun & Bradstreet.

COMPARE THE ROOT SYSTEMS

The Life, Growth and Yield of the Pecan Tree Depends on Its Root System. Examine the Comparison pictured above. We GUARANTEE our trees to have the Best Root System Known.

STANDARD OR WELL-KNOWN EVERBLOOMING ROSE BUSHES

We guarantee to furnish good plants, and all orders are shipped subject to approval upon arrival. We can not guarantee all plants to live and grow, however.

CHARLES K. DOUGLAS. HT. Fine, long-pointed buds, opening to large, loosely formed flowers of striking crimson-scarlet; slightly fragrant. The strong, branching plants are of ideal bedding habit and make a striking garden picture. Abundant, healthy foliage.

E. G. HILL. HT. Very beautiful, dark red buds which open to immense, long-lasting, dazzling scarlet flowers, with the fragrance of the old-time roses. The blooms are full to the center, compact, of many petals, and last a long time on the bush or cut. For a rose so full, the plant is unusually prolific and makes better than average garden growth.

ETOILE DE HOLLANDE. HT. Brilliant red blooms of magnificent size, perfect in half-open state; attractive centers when full blown; enormous petals; fragrant. Healthy. Free flowering.

RED RADIANCE. HT. Big, globular blooms of deep rose-red on strong canes. The plant blooms freely until frost, and in every respect is fully equal to Radiance. Foliage excellent.

AMERICAN BEAUTY. HP. Large, globular buds and deep vinous, crimson flowers; intensely fragrant; borne freely at frequent intervals on strong stems over a long season. A very popular variety which always wins great admiration for its delightful perfume.

EDITH NELLIE PERKINS. PH. The open bloom is a delightfully shaped flower of two contrasting tints, the outside of the petals gleaming with bright orange-cerise and the inside overspread with pale salmon-pink flushed with orange-gold. The buds are firm and handsome, richly dyed with copper tones before they open. The plant stands up vigorously. We have found this variety more than ordinarily vigorous, so that it makes a splendid bush, lending itself to formal bedding use, as well as providing an abundance of exquisite blooms for cut flowers.

RADIANCE. HT. Brilliant rose-pink buds, opening to well-formed, shining, globular flowers, with lighter tints on reverse of petals; very fragrant. Plant of splendid growth; wonder bloomer.

MARGARET McGREDY. HT. It is almost impossible to describe the extraordinary vividness of this scarlet-orange or brick-red flower. The symmetrical blooms are cup-shaped and double, with an excellent circular arrangement of the petals and they are produced with astonishing freedom throughout the entire season. Its sturdy growth, delightful perfume, and remarkable blend of colors, is everything that could be desired. We recommend it especially for mass planting.

MARY, COUNTESS OF ILCHESTER. HT. Large, double, full, cupped blooms of deep rose-pink; fragrant. Plant bushy; blooms freely; very hardy. Fifty-two petals.

EDITOR McFARLAND. HT. A deep, sparkling pink rose of the Lady Ashtown type; borne with the utmost liberality by vigorous, upright bushes which hold the flowers stiffly erect and make them particularly suitable for cutting. The best pink rose for the South.

GOLDEN DAWN. HT. A lovely rose originated in Australia, which experienced rosarians unite in pronouncing the finest light yellow garden rose grown in this country. The flowers are fully double, deep yellow in bud, occasionally tinged with bronze, and opening to fine, richly fragrant, pale lemon-yellow flowers of great size and lasting quality. The plants are dwarf and spreading, with dark, glossy green foliage, which seems impervious to the attacks of blackspot. It is most extraordinary for a yellow rose to combine such qualities.

LADY HILLINGDON. T. Slender, pointed buds and elegantly cupped flowers of deep saffron-yellow, paling lighter toward edges of petals; fragrant; erect; perfect foliage. Needs some shade in hot weather. Free flowering.

LUXEMBOURG. HT. Yellow, shading to copper at center. Stiff, upright stems, producing large flowers especially valuable for cutting.

MRS. PIERRE S. du PONT. PH. Here is a splendid new golden yellow rose which promises to be the finest of its color for garden use. The well-shaped golden yellow flowers resemble those of the lovely old Mme. Butterfly in form. The plant is compact and leafy, growing about 2½ feet high, and blooms with unceasing abundance throughout the entire season. We regard it very highly.

KAISERIN AUGUSTE VIKTORIA. HT. Well-formed, creamy buds, which develop slowly to snowy white blooms of perfect form, with lemon tint at center; fragrant; moderately vigorous; hardy. Ninety-eight petals.

PRESIDENT HERBERT HOOVER. HT. Cross of Sensation and Souvenir de Claudius Pernet. Large, cerise-pink, flame, scarlet, and yellow bloom; thick, broad petals; fragrant. This variety has proved itself as one of the best of the newer garden roses for the South.

TALISMAN. HT. Brilliant red and golden buds that open to beautifully shaped blooms of scarlet-orange and golden yellow. Vigorous; tall; blooms constantly. Thrives almost everywhere. The 1933 American Rose Annual places Talisman in the No. 1 list of roses.
